1 Manual Call Point Red Wireless XPA-MC-14006-APO overview

The Manual Call Point is compliant with EN 54-11. It is wireless and is powered by two independent packs of three AA alkaline batteries with a typical five year life.

1.1 Brand Features

- modern styling
- loop-powered interface operating on 868MHz
- wireless addresses seen by control panel as normal addresses
- radio base with wireless circuitry and battery compartment
- chamber designed to inhibit dirt penetration and thus reduce false alarms
- automatic drift compensation with DirtAlert[™] warning
- algorithms for transient alarm rejection
- FasTest™ reduces time taken to test detectors
- remote test facility
- 3-5 years battery life

If wiring is a challenge in the building then XP wireless products are your solutions.

XP is a system in which individual detectors and other wireless devices communicate with the FX ALC loop by radio signals. An interface is connected to the ALC loop in the same way as any addressable interface.

Every wireless XP device is assigned an address and this address is recognized by the Esmi Sense FDP and FX 3NET panel.

Note! When replacing batteries, allow the device to power down for a period of two minutes before installing replacements.

Note! When replacement batteries are required, all batteries must be replaced together.

Note! Disposing of batteries should be in accordance with European and/or local regulations.

1.2 System Principle of XP Wireless Fire Detection products

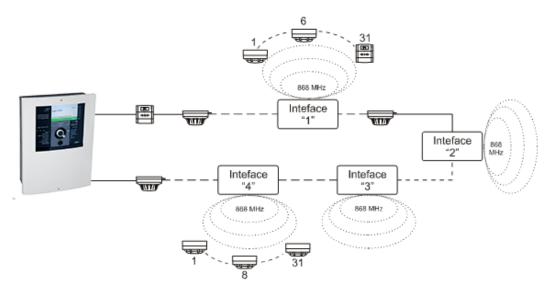

Figure 1 XP Wireless System Principle

Note! The maximum number of interfaces in a site is 5. If more than 5 interfaces are needed, please contact the supplier.

Note! The interface takes one address in the ALC loop.

Note! The maximum number of addressable radio devices per interface is 31.

Note! A good system planning is absolutely necessary to ensure a reliable wireless communication. The field strength must be checked with the survey tool.
