\*3. The drive can trigger the overload protection function within the overload tolerance if the output frequency is less than 6 Hz. Do not allow the overload more than once every ten minutes.

\*4. Install an UL Type 1 kit on an Open-chassis type (IP20) to convert the drive to a Enclosed wall-mounted type (UL Type 1).

Installation

Standard connections

- \*1. When you install a DC reactor, you must remove the jumper between terminals +1 and +2.
- \*2. Models 2110 to 2415 and 4060 to 4675 have a DC reactor.
- \*3. Connect peripheral options to terminals -, +1, +2, B1 and B2.
- \*4. Use only SOURCE Mode for Safe Disable input.
- \*5. Disconnect the wire jumper between H1 and HC, and H2 and HC to use the Safe Disable input.

Main circuit

Terminal	Name	Function
R/L1, S/L2, T/L3	Main circuit power supply input	Used to connect a power supply

- \*1. Do not close the circuit between D24V and D0V terminals. Failure to obey will cause damage to the drive.
- \*2. Do not close the circuit between HC and D0V terminals. Failure to obey will cause damage to the drive.
- \*3. Do not set functions that frequently switch ON/OFF to MFDO because this will decrease the performance life of the relay contacts.
- \*4. Select DIP switch S2 to ON to enable the termination resistor in the last drive in a MEMOBUS/Modbus network.
