

Video external unit for Niko Home Control, with 1 illuminated touch button

550-22011

4 year warranty

This ultra-flat video external unit for flush mounting is finished with a black anodised aluminum front plate (3 mm thick). The device has a 120° HD 1080P color camera and a nameplate made of Plexiglas that can be engraved. The touch key is maintenance-free and very durable. The video external unit is supplied with a flush-mounted box. This video external unit has 1 illuminated touch button. The unique lighting concept (patent pending) provides a refined and homogeneous illumination of the engraved nameplate, which guarantees good visibility in the dark. In combination with the touchscreen (or smartphone or tablet) as an internal video unit, the external video unit can be used to integrate access control into a Niko Home Control installation. Please note: we recommend providing at least one touchscreen 2 on top of the smartphones and/or tablets, because a wired device is always more reliable than a mobile one.

Technical data

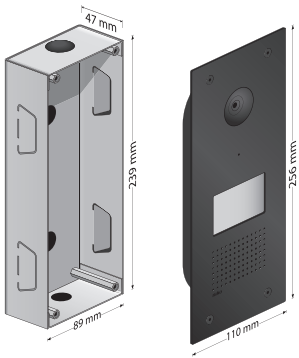

Video external unit for Niko Home Control, with 1 illuminated touch button.

- Function: • each non-programmed push button can operate the light, light symbol supplied
