# Flexible installation

## Perfect fit

Protective heights are available in increments of 40 mm up to 1,000 mm\*. The perfect protective height for any protected area ensures safety and eliminates the need for additional measures.

**Problem**

The light curtain that does not completely fit the protected area requires additional measures (e.g., adding a protection cover).

**F3SG-SR\***

The flexible height model requires no additional measures.

\* F3SG-SR Finger and Hand Protection models only.

## Protection without dead space\*

The F3SG-SR Series eliminates dead space that previously existed even when light curtains are series-connected or U-shape connected. Safer systems can be designed.

**Problem**

Dead space exists at the joint.

**F3SG-SR\***

Eliminates dead space and ensures safety.

\* Except for F3SG-SR Finger Protection models.

## Simple wiring for flexible design

The F3SG-PG-C Perimeter Guarding Passive Mirror requires wiring of only the emitter/receiver. The use of mirror columns allows wiring at one location for protection around perimeters of equipment. They reduce wiring duct design and wiring time.

Wiring only the emitter/receiver

# Color indication of beam status for quick and easy beam adjustment

Reduce beam adjustment time.

## Area Beam Indicator (ABI) for an at-a-glance check of beam status Patent pending

The ON or OFF state of the light curtain and low light intensity can be checked.  
The ABI also facilitates fine adjustment of beams for long-distance sensing.

**Laser Alignment Pointer**  
**F39-PTG**

Assists with beam adjustment.  
Easy-to-see laser beam shows the sensor orientation. It can be attached on the spatter protection cover.

# A variety of optional accessories for easy installation and angle adjustment

Reduce installation time and easily adjust beams after installation without relying on the expertise of experienced engineers.

## Easy beam adjustment after installation

### Problem

It is difficult to adjust beams after the light curtain is installed and the protection cover is attached.

### F3SG-SR/PG

The rugged metal housing of the light curtain does not need a protection cover. Beams can be adjusted using optional brackets.

Adjustable Top / Bottom Bracket  
F3SJ, F3SN Adapter  
F39-LSGTB-SJ

This bracket used at the top and bottom of the light curtain provides horizontal adjustment of  $\pm 22.5^\circ$ .

Adjustable Side-Mount Bracket

# Reduced wiring system for various equipment

Wiring work during line installation and maintenance can be greatly reduced.

## Simple wiring around large equipment

**Problem**

The distance of wiring around large facilities generally becomes long.

**F3SG-SR/PG**

The reduced wiring system reduces the number of cables and terminal blocks and wiring time.

**Reduced wiring connector**

Y-Joint Plug /  
Socket Connector  
F39-GCNY2

Note: Refer to the User's Manual (Cat. No. Z405) for more information on cable extension.

# One cable connection to control panel

Options provide simple wiring for muting.

## Problem

In order to maintain productivity, the light curtains are often used with muting sensors, which makes wiring in the control panel more complicated.

## F3SG-SR/PG

Options to reduce wiring simplify wiring and installation of muting sensors.

### Muting Sensor Arm Mounter F39-FMA

The muting sensor arm mounter facilitates installation of a muting sensor.

### Muting Sensor Connection Box F39-GCN5

The connection box simplifies wiring for muting, and only one cable is used to connect to the control panel.

Note : The E3Z Muting Sensor is sold separately.

Smartclick connectors to quickly connect cables

## Robustness for operation in harsh environments

Specifications suitable for use in any environment contribute to stable operation.

Light curtains tend to malfunction in harsh environments where safety measures are required.

Cold storage warehouse

Safety measures cannot be implemented because there is no light curtain that can be used in cold environments.

Metal working process

Oil that gets inside the light curtain causes failure at locations where oil mist is present.

Food processing line

Cleaning solution that gets inside the light curtain during machine wash-down causes failure.

Use in harsh environments

The spattered or dusty optical surface of the light curtain causes a malfunction or an unplanned machine stop.

Use in temperatures down to **-30°C**

Waterproof, oil resistance  
**IP65/IP67**  
**IP67G**

IEC 60529

**Tightly sealed structure improved environmental resistance**

The unique structure firmly presses the optical surface. Stable sealing performance resists penetration of liquid inside the light curtain, which improves environmental resistance of the housing.

**Patent pending**

**High-power optical system provides stable detection**

The maximum operating range of the F3SG-SR Safety Light Curtain is 20 m and of the F3SG-PG Safety Multi-Light Beam 70 m. The high-power beam is robust in harsh environments.

**Metal housing increases ruggedness**

**Laser marked information withstands harsh environments**

# Easy maintenance

Even inexperienced operators can easily check status and replace light curtains.

## Easy error diagnosis with clear color indicators

The light curtain status can be checked at a glance.

### Status indicator

Clear LED indicators with labels help perform predictive maintenance by dirt detection and determine the optimal replacement timing.

### Colors and patterns indicate the status

Status indicator*	Color	Status
	Red/ Illuminated	LOCKOUT state due to a recoverable error
	Red/ Blinking	LOCKOUT state due to a replacement-recommended error
	Orange/ Illuminated	Safety outputs are instantaneously turned OFF due to ambient light, vibration, or noise
	Orange/ Blinking	The Intelligent Tap is in LOCKOUT state

\* The **M** status indicator is used for the 14-mm detection capability model.

### Lamp

Output status can be checked at a glance.  
F39-SGLP

Output information can be assigned to the lamp and ABI.

Status, such as light intensity drop, can be checked from a distance.

For information on other indicators, refer to *Indicator* on page 126 or *Troubleshooting* on page 130.

## Back up and restore settings with Intelligent Tap

Replacement and setting time during maintenance can be reduced to 1/10 or less\*.

### Plug & Work for quick replacement

Install the Intelligent Tap to automatically copy the settings of the replaced light curtain to a new one. Virtually anyone can easily replace light curtains and immediately restart the machine.

# Preventive maintenance

The status of the light curtain is monitored, and the abnormal state is displayed. This helps minimize machine downtime.

## Visualization of status

Various devices can be connected via IO-Link.\*1  
 Low light intensity due to dirt on the light curtain can be displayed on the monitor, enabling preventive maintenance prior to erroneous detection.

## Manually loaded machining : PSDI

PSDI\*, provided as standard, reduces operator effort and increases productivity

There is no need for the operator to press a two-hand control switch, saving operating time and increasing operating efficiency.

### Single break

The machine restarts when the light curtain is interrupted and reset once.

Example : Manual loading and automatic unloading press

### Double break

The machine restarts when the interruption and reset are repeated twice.

Example : Manual loading and manual unloading press

\* PSDI : Presence Sensing Device Initiation  
Read the *User's Manual* (Cat. No. Z405) before using.  
Note: Comply with laws and regulations in the countries where the machine operates.

## Dangerous restart prevention : Pre-Reset

The Pre-Reset function prevents possible accidents

This function prevents the restart of equipment while an unseen worker is still near the robot, ensuring operators' safety.

- 1 Press the pre-reset switch inside the hazardous zone.
- 2 Get out of the hazardous zone.
- 3 Press the reset switch in the control panel to restart the light curtain.  
The machine is ready for restart.

The equipment cannot be restarted until the pre-reset switch of the light curtain is pressed and the light curtain is reset.

## Ignoring interrupted beams : Reduced Resolution

Reduced Resolution changes the detection capability of the light curtain

Even when objects (with a size of 1 to 3 interrupted beams) are present discontinuously, this function ignores them and keeps the safety outputs ON. This helps maintain productivity.

### Example : Arm and body protection

Safety output is kept ON even if worker's finger and an object interrupt 2 beams because they are allowed to enter.

When worker's arm or body, which interrupts 3 beams is detected, safety output is turned OFF.

Note : Ensure that the desired safety distance is maintained.

- \*1. Reverse the polarity of the power supply when using in the NPN system. Select a safety controller of PNP or NPN type according to the system of your application.
- \*2. Connect the line to 0 V if F3SG-SR or F3SG-PGA-L is used in Short Mode.
- \*3. If External Test is used, refer to the *User's Manual* (Man.No.Z405).
- \*4. Connect the line to 24V/0V (brown) of the receiver via a lockout reset switch (NC contact) if Lockout Reset is used.
- \*5. Refer to page 112 for more information.
- \*6. The safety controller and the F3SG-SR/PG must share the power supply or be connected to the common terminal of the power supply.
- \*7. This is the case for a PELV circuit.

**Note:** Functional earth connection to the F3SG-SR/PG housing is unnecessary when you use the F3SG-SR/PG in a general industrial environment where noise control or stable power supply is considered. However, when you use the F3SG-SR/PG in an environment where there may be excessive noise from surroundings or stable power supply may be interfered, it is recommended the F3SG-SR/PG be connected to functional earth.

The wiring examples in later pages do not indicate functional earth. To use functional earth, wire an earth cable according to the example above. Refer to the *User's Manual* (Man.No.Z405) for more information.

- Note: 1.** When using the Intelligent Tap (F39-SGIT-IL3), the following functions are not available.
- External Test
  - Operating Range Selection by wiring
  - Optical Synchronization
- 2.** For the functional earth connection, refer to page 116.

- S1: Lockout reset switch, override switch or override cancel switch  
S2, S3: Muting sensor  
PLC: Programmable logic controller (Used for monitoring only. NOT related to safety system.)

- \*1. Reverse the polarity of the power supply when using in the NPN system. Select a PLC and a safety controller of PNP or NPN type according to the system of your application.
- \*2. Also used as OVERRIDE INPUT line.
- \*3. Make sure to connect an override cancel switch to the RESET line when using the override function. Otherwise the override state may not be released by the override cancel switch, resulting in serious injury.
- \*4. When connecting to the PLC, the output mode must be changed with the SD Manager 3 according to your application. For the setting this function, refer to the *User's Manual* (Man.No.Z405).
- \*5. Refer to page 112 for more information.
- \*6. The safety controller and the F3SG-SR/PG must share the power supply or be connected to the common terminal of the power supply.
- \*7. For connecting with the IO-Link Master unit, refer to an instruction manual of the IO-Link Master unit you use.
- \*8. This is the case for a PELV circuit.
- \*9. Set the function with the DIP Switches on the Intelligent Tap or SD Manager 3.
- \*10. Set the function with the DIP Switches on the Intelligent Tap or SD Manager 3 and wire according to the wiring diagram after restoring the settings to the FE3SG-SR/PG when the F3SG-SR/PG or F3SG-PGA-L is used in Short Mode. The F3SG-PGA-A/C do not support the operating range selection function.
- \*11. When wiring the emitter/receiver of the F3SG-PGA-C, follow the same wiring as for the receiver in the figure above. Wiring of the emitter side is not required.

## Common to F3SG-SR and F3SG-PG

Description	Checking by		Error code (hex) *1	Cause and measures	
	Indicator	SD Manager 3/ SD Manager 3 Mobile APP			
Safety output error	X	X	60, 6B, 6C	The OSSD lines may be short-circuited to each other or another signal line may be short-circuited to the OSSD line. Wire the OSSD lines properly.	
			56	The polarity does not match between the power supply and the OSSD lines. Check if a correct polarity is selected for the PNP/NPN setting according to your application. Also check: <ul style="list-style-type: none"> <li>• if the power supply (0 VDC or 24 VDC) of the Intelligent Tap and F3SG-SR/PG is wired as intended.</li> <li>• if the OSSD lines are properly wired.</li> </ul>	
Recoverable error	X	---	---	The error may occur due to a temporary cause. Identify the cause by the status of the other LED indicator and take measures.	
Replacement-recommended error				The error may occur due to a product failure. If the measure according to the status of the other LED indicator does not work, it is recommended to replace the F3SG-SR/PG.	
Intelligent Tap error	X	---	---	An error due to noise may have occurred in the internal circuit of the Intelligent Tap. Check the noise level in the environment.	
				The internal circuit of the Intelligent Tap may be defective. Replace the Intelligent Tap.	
Error due to change of PNP/NPN polarity during operation	X	X	E7	An error due to noise may have occurred in the internal circuit. Check the noise level in the environment.	
				The internal circuit may be defective. Replace the F3SG-SR/PG.	
Blanking monitoring error	X	X	EC	An error is detected by the Fixed Blanking Monitoring function or the Floating Blanking Monitoring function.	
Configuration error	X	X	39, 3A, 3B	The cascading cable may be short-circuited, broken, or disconnected. Check that the cascading cable should be tightly connected. If the cascading cable is broken, replace it.	
				The number of connected sensors or beams may have exceeded the maximum value due to cascading. Check the configuration.	
			34	3C, 3E, 3F	A model name does not match between emitter and receiver. Check that the emitter and receiver are the same model.
				An error may have occurred to the internal information of the model name of the F3SG-SR/PG due to effect of noise. If other devices using the same power supply generate noise, do not share the same power supply with other devices, and use a separate power supply exclusively for the safety components. The inductive noise tends to be induced especially if the power supply line of the machine guarded and the power supply line of the Intelligent Tap are arranged in parallel. Arrange the exclusive power supply near the Intelligent Tap or lay the power supply line of the Intelligent Tap away from the power supply line of the machine guarded. If the power supply for the Intelligent Tap is located near the power supply of the machine guarded and it shares the same grounding wire, it is subject to the influence of common mode noise. Separate the grounding point or use it as the exclusive ground.	
An error may have occurred in the internal circuit. Replace the F3SG-SR/PG.					
Parameter error	X	X	F1	The settings do not match between the Intelligent Tap and F3SG-SR/PG. Perform the Backup.	
			40	The settings of the F3SG-SR/PG may be faulty. Check if the settings are correct.

## Common to F3SG-SR and F3SG-PG

Description	Checking by		Error code (hex) *1	Cause and measures
	Indicator	SD Manager 3/ SD Manager 3 Mobile APP		
Cap error	X	X	4F	A cap may be detached. Attach the cap properly.
Other sensor error	X	X	38	Other sensor being cascaded caused an error. Check the indicator of the sensor.
DIP Switch setting error	X	X	E7, E8	A DIP Switch on the Intelligent Tap setting may have been changed during operation. Check if a DIP Switch setting was changed or not.
Communication error	---	X	30, 32	The communication lines or other lines may be short-circuited or broken. Check if the cascading or extension cables. If the cascading cable or extension cables is broken, replace it.
			31	An error may have occurred to the communication due to effect of noise. If other devices using the same power supply generate noise, do not share the same power supply with other devices, and use a separate power supply exclusively for the safety components. The inductive noise tends to be induced especially if the power supply line of the machine guarded and the power supply line of the Intelligent Tap are arranged in parallel. Arrange the exclusive power supply near the Intelligent Tap or lay the power supply line of the Intelligent Tap away from the power supply line of the machine guarded. If the power supply for the Intelligent Tap is located near the power supply of the machine guarded and it shares the same grounding wire, it is subject to the influence of common mode noise. Separate the grounding point or use it as the exclusive ground. An error may have occurred in the internal circuit. Replace the F3SG-SR/PG.
Safety output error due to power supply voltage or noise	X	X	19	The power supply voltage may have dropped temporarily when the F3SG-SR/PG is in operation. Check for temporary power supply voltage drop (by about 12 VDC) by the influence of the inductive load, etc. If the exclusive power supply is not used, check the power consumption of other connected devices for enough capacity. Power supply voltage may be outside the rated range. Connect the F3SG-SR/PG to a 24 VDC±20% power supply voltage. Voltage fluctuation may have occurred due to insufficient power supply capacity. Replace the power supply with one that has a larger capacity. Instantaneous break or instantaneous stop may have occurred due to power sharing with other devices. Do not share the power supply with other devices. Connect the F3SG-SR/PG to a power supply that is dedicated to electro-sensitive protective devices for electro-sensitive protective equipment such as the F3SG-SR/PG, safety controller, etc.
			1A	Effect of noise may be excessive. If other devices using the same power supply generate noise, do not share the same power supply with other devices, and use a separate power supply exclusively for the safety components. The inductive noise tends to be induced especially if the power supply line of the machine guarded and the power supply line of the F3SG-SR/PG are arranged in parallel. Arrange the exclusive power supply near the F3SG-SR/PG or lay the power supply line of the F3SG-SR/PG away from the power supply line of the machine guarded. If the power supply for the F3SG-SR/PG is located near the power supply of the machine guarded and it shares the same grounding wire, it is subject to the influence of common mode noise. Separate the grounding point or use it as the exclusive ground.

## Intelligent Tap

If the Intelligent Tap detects any failure, it transitions to the LOCKOUT state. Under the LOCKOUT state, the ERR indicator is turned ON. Identify an error according to the combination of the indicators when the error occurs. See the following troubleshooting tables to take measures. For detail, Refer to *User's Manual* (Man. No. Z405).

### Combination of indicators and error description

ERR (Red)	IN (Yellow)	OUT (Green/Red)	IO-Link (Green)	Error description
	---	---	---	Communication error DIP Switch circuit error at startup
			---	Communication error in Backup
		Green	---	Communication error in Restoration
		Red	---	Communication error between the F3SG-SR/PG and the Intelligent Tap
		Green	---	Restoration failed
		Red	---	LOCKOUT state of the F3SG-SR/PG
	---	---		IO-Link circuit error
	---	---	---	Power supply voltage error, or other errors

- Note:**
- The signals output to IO-Link or IN and OUT indicators show the statuses of the F3SG-SR/PG or Intelligent Tap except their LOCKOUT state.
  - The muting inputs A and B are kept in the OFF state when the LOCKOUT state occurs due to the power supply voltage error.

Communication error	X	X	1D	The communication lines or other lines may be short-circuited or broken. Check the cables for cascading or extension cables. Communication error in Backup	X	X	1E	The communication lines or other lines may be short-circuited or broken. Check the cables for cascading or extension cables. If the wiring is extended with cables other than specified, the cables used for extension may not have performance equivalent or greater than the specified cables. Use cables with the same performance or more than the specified cables. Effect of noise may be excessive. If other devices using the same power supply generate noise, do not share the same power supply with other devices, and use a separate power supply exclusively for the safety components. The inductive noise tends to be induced especially if the power supply line of the machine guarded and the power supply line of the Intelligent Tap are arranged in parallel. Arrange the exclusive power supply near the Intelligent Tap or lay the power supply line of the Intelligent Tap away from the power supply line of the machine guarded. If the power supply for the Intelligent Tap is located near the power supply of the machine guarded and it shares the same grounding wire, it is subject to the influence of common mode noise. Separate the grounding point or use it as the exclusive ground.
				The internal circuit of the Intelligent Tap may be defective. Replace the Intelligent Tap.
